

DESS

# Catalogue PRE-MILLED 2023

σ

# **PRE-MILLED**

Over the last decade, we've seen a revolutionary transformation in the dental industry. New technology added to the rise of saas solutions, are setting the grounds for more customization in the abutments market.

At DESS<sup>®</sup> we pioneered launching our first range of Pre-milled blanks, back in 2012, but the market wasn't there yet.

In the recent years, however, both in-house milling machines and the CADCAM softwares have not only improved but also made the customization more affordable, this in conjunction with a new generation of profesionals are helping modern dentistry to thrive and more certainly be at the foreground of the industry.

Now DESS<sup>®</sup> has become one of the leading manufacturers of premilled and a reference in the DiY dentstry.

DESS<sup>®</sup> offers a full assortment of Titanium grade V ELI and Cobalt Chrome pre-milled blanks available in 10mm & 14mm diameters, in the most popular implant connections of the market.

The blanks work together with the DESS<sup>®</sup> holder systems specially developed for Imes-Icore<sup>®</sup> VHF<sup>®</sup> machines, ZirkonZahn<sup>®</sup> wet mill, Yenadent<sup>®</sup> and also available a universal holder for any other machine that use standard 98mm discs and 3R rapid changers.

#### The DESS holder system has several advantages to other solutions:

Quick "screw-on" system where the pre-milled blanks are attached to a subholder outside the machine and then placed in the holder that remains in the machine. This makes it easier, cleaner and faster when it comes to placing and removing blocks.

Also, due to the unique way of "pull down and lock" holding system with a screw that secures the pre-milled blank, assuring the maximum precision and stability during the milling process is achieved. Pre-milled socket positions and sub-holders are laser identified to better ensure what is where and optimise the milling process.

# **OUR BLANKS**

Only the finest Titanium Grade V ELI (extra low intersticial) or also called Grade 23, and the exclusive Micro Melt Cobalt-Chrome, are used to manufacture our Premilled Blanks.

A total millable length of 20 mm makes it one of the longest in the market.

Our Micro Melt Cobalt-Chrome alloy has no internal tension so however radical your design is, the final custom abutment will preserve the shape along the process resulting in lower probability of ceramic cracks.

The DESS<sup>®</sup> Cobalt-Chrome is also **Easier to mill** than others alloys in the market, which will preserve your tools.

Contact our support team to know the exact thermal expansion coefficient to assure the highest level of quality on your final work.

Minimal gingival transition height, just 0,3 mm to allow a maximum degree of design freedom.

"Pull down and lock" holding system. Developed by DESS<sup>®</sup> back in 2012, allows a strong and precise positioning of the pre-milled blank inside its socket.

#### Available in: - Titanium 10mm or 14mm - Cobalt-Chrome 14mm

DESS<sup>®</sup> connection precision is guaranteed in all our Premilled Blanks.

# **FULL DIY** CONTROL

The DESS® AURUM Milling tool will allow you to create screw retained bars, bridges or multiple with an angulated channel of up to 25° by using the AURUMBase<sup>®</sup> screw.

This solution is available for those compatibilities where the AURUMBase<sup>®</sup>, angulated screw channel solution is available

> The AURUM Milling Tool replicates the AURUMBase® screw seat.
