Why steel burs are disappearing in Europe

Many dentists hear that steel burs are “banned” in Europe. In reality, under the EU Medical Device Regulation (EU MDR), steel burs are not prohibited, but most are now classified as single-use devices, so they cannot be reprocessed or reused.

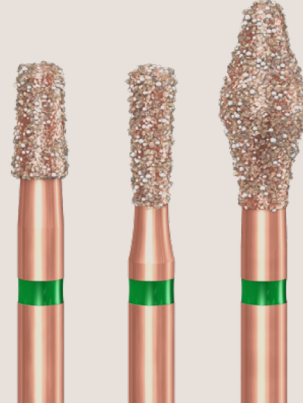

- EU MDR tightened infection control and sterilisation requirements.
- Steel burs wear quickly, are difficult to validate for safe reuse, many manufacturers no longer certify them as reusable.
- Steel burs are being phased out in Europe, with practices shifting to diamond and tungsten alternatives to meet modern compliance standards.
- Our data indicates that there are a few countries where steel burs are sold: UK, Australia and New Zealand.

Why Henry Schein?

What happened in a Queens pharmacy in 1932?

In 1932, during the Great Depression, Henry Schein kept a simple notebook behind the counter of his small New York pharmacy, recording the names of customers who could not afford their medicines. That quiet act of trust shaped a company that, nearly a century later, still puts long-term relationships at the centre of everything it does.
