**VENUE DETAILS**

**WELLINGTON**

Date:  Wednesday 23rd July 2014
Location:  Museum Art Hotel, 90 Cable Street, Wellington NZ
Time:  Registration 8.30am, Lecture and Workshop 9.00am - 5.00pm
Cost:  A$695 including morning/afternoon tea and lunch
Presenters:  Dr. Wayne Gillingham (Oral Surgeon, Wellington), Dr. Mahnaz Syed (Periodontist, Perth)

**QUEENSTOWN**

Date:  Friday 25th July 2014
Location:  Hilton - Queenstown, Peninsula Rd, Kelvin Heights, Queenstown NZ
Time:  Registration 8.30am, Lecture and Workshop 9.00am - 5.00pm
Cost:  A$695 including morning/afternoon tea and lunch
Presenter:  Dr. Mahnaz Syed (Periodontist, Perth)

**MELBOURNE**

Date:  Friday 12th September 2014
Location:  Royal College of Surgeons - 250/240-290 Spring St, East Melbourne VIC
Time:  Registration 8.30am, Lecture and Workshop 9.00am - 5.00pm
Cost:  A$695 including morning/afternoon tea and lunch
Presenter:  Dr. Mahnaz Syed (Periodontist, Perth)

6 CPD hours (only for Australian participants due to NZDA regulations)
Strictly Limited to 20 Participants

**July 2014**

Wellington
Queenstown

**September 2014**

Melbourne
GEISTLICH HANDS-ON COURSE
Practitioners will have the unique opportunity to “Develop their skills” both theoretical and practical, in the company of Dr. Mahnaz Syed, Dr. Wayne Gillingham and Geistlich Biomaterials, the Leaders in Dental Bone and Tissue Regeneration.

Wellington
With Dr. Wayne Gillingham (Oral Surgeon, Wellington), Dr. Mahnaz Syed (Periodontist, Perth)
Wednesday 23rd July
Intercontinental Hotel

Queenstown
With Dr. Mahnaz Syed
Friday 25th July
The Hilton Queenstown

Melbourne
With Dr. Mahnaz Syed
Friday 12th September
The Royal College of Surgeons

HANDS-ON WORKSHOP ON PIG JAWS
Minimally traumatic surgery is the goal of our everyday practice. Over the past decade there has been a paradigm shift from undertaking our surgical procedures with conventional burs to minimally traumatic instruments such as piezosurgery. Trauma during surgery and tooth extractions impacts on wound healing and post operative discomfort for our patients. Piezosurgery has been shown to be precise and selective and minimally traumatic, when used for any type of bone surgery and tooth extractions.

Treatment protocols have changed replacing hard and soft tissues both prior to and per-implant placement. Preserving ridge dimensions post extraction can be predictably achieved and a decision tree is available for when to use the suitable technique. New materials such as Mucograft are also available to treat recession defects and replace keratinised tissue. We will be discussing the rationale for using regenerative hard and soft tissue materials which are currently available to us, and the science supporting their use.

This course is intended for anyone interested in expanding their treatment options for extractions and hard and soft tissue grafting techniques.

Geistlich Biomaterials

COURSE PRESENTERS
Dr. Mahnaz Syed
SPECIALIST IN PERIODONTICS
BDS, M.Clin.Dent, FDSrCS, DGDP, MRDCS, MRACDS

Dr. Syed qualified from Guy's Hospital London with her Bachelor in dental surgery in 1992. She then spent some time in general dental practice. She obtained her specialty training with distinction at the Royal London Hospital after which she stayed on, both working and teaching at the Royal London. She was lead clinical researcher in a three-year treatment study investigating risk factors in patients with aggressive periodontitis. She was clinical lead in mucogingival surgery and this involved training both senior and junior staff.

Dr. Syed has presented her research both in the UK and in Europe. She has lived in Perth for the past 6 years and has been actively involved in CPD and teaching. She now works in private periodontal practice and is involved with the implant teaching at UWA.

Dr. Wayne Gillingham
ORAL & MAXILLOFACIAL SURGEON
MBChB (Otago), MDS (OMS), FRACDS (OMS), FDSrCS (Eng), BDS, FRACDS

Wayne has an outstanding academic record, with qualifications in Dentistry, Medicine and Surgery. He has specialist qualifications in medical and surgical problems affecting the face, jaws and mouth. See the “Patient information” section for more information.

Wayne has formal training in the full range of Oral & Maxillofacial Surgery and has gained 3 years’ experience in the United Kingdom as well as his years spent in hospitals throughout New Zealand. He is trained to a specialist level and has been formally recognised by his colleagues and government regulatory bodies to provide Specialist care since 2004. Keeping up to date with new technologies, procedures and therapies is a continual process. As well as weekly multidisciplinary interaction Wayne participates in more than double the required continuing medical education activities. He has regular speaking engagements to educate other health professionals on new developments.

COURSE OBJECTIVES
The program will cover all the necessities for a successful socket preservation treatment:

- Scientific rationale for Piezosurgery as compared to conventional surgery
- Piezosurgery assisted extraction technique with placement of long-term stable grafting materials
- Piezosurgery assisted membrane elevation on egg shells
- Alternative soft-tissue grafts for recession repair or gaining keratinised tissue
- Protocol for alternative sinus lift procedure (lecture only)
