CPD
Hours

Synopsis:

Rubber Dam isolation is essential for successful routine endodontic and restorative treatment. The course will cover single and multiple tooth isolation techniques.

Course Outline:

Rubber Dam isolation is essential for routine endodontic and restorative treatment, learning it is easier than you think. This evening course will address equipment selection, single and multiple tooth isolation techniques. The techniques will be demonstrated with video footage and the participants will experience hands on workshop, to practice these techniques under the guidance of Endodontist Dr Glen Weston.

Learning Objectives:

- Identify clamps for specific cases
- Two clamps that will cover most clinical situations
- Utilise a simple technique that allows isolation of most single teeth in 60 seconds or less
- How to isolate multiple teeth
- Clampless isolation technique for anterior teeth
- Fine tuning isolation techniques in complicated cases
- Dealing with leaks

Presenters Biography:

Dr Glen Weston is a past President of Queensland Branch of the Australian Society of Endodontology, as well as the Federal Secretary/Treasurer of the Australian Society of Endodontology and has been in specialist endodontic practice in Brisbane since 1998.

Glen has been a keynote speaker at international dental conferences and he is actively involved in endodontic continuing education across Australia. He has held the position of visiting lecturer, external examiner and clinical supervisor at the University of Queensland Dental School.
