Locations
Melbourne 25 July 2016
Sydney 27 July 2016
Brisbane 29 July 2016

6 Scientific CPD hours
Cost $895 including morning/afternoon tea and lunch

Treatment strategies for soft & hard-tissue management

Esthetic and functional concerns

In many cases periodontal patients need to be restored with dental implants. As hard and soft tissue defects already pre-exist in these patients, strategies for soft and hard-tissue augmentation have to be developed, which are suitable for a patient with history of periodontitis.

This unique course has a focus on the following key areas and will also include some hands-on parts:

- The periodontal patient: treatment strategies to treat and restore
- Modified anti-infective strategies in the field of non-surgical periodontal therapies
- Refined regenerative approaches combining GTR procedures with soft tissue management
- The aesthetic patient: treatment strategies for soft and hard tissue
- Periodontal plastic surgery techniques
- Ridge augmentation including soft tissue grafts and contemporary alternatives to connective grafts

LEADING REGENERATION
