

Achieving Optimal Bonding

Choosing adhesives for your practice

Dr Simon Watson

Prosthodontist DCD (Pros), BDS (Honours)

2
CPD
hours

Complimentary Continuing Education

Etching
Technique

Overview

Simon's presentation will review the evolution of adhesives in dentistry, and consider the pros and cons of each generation and their relevance to our modern dental bonding systems.

He will present an analysis of the material science of the currently available dental adhesives to achieve an understanding of the clinical capabilities of these systems. The role of the clinician in obtaining optimal bonding performance with regard to improved bond strength, durability and reduced post-operative sensitivity will be discussed.

This lecture will provide clinical tips and tricks to ensure clinicians can achieve the highest standards of clinical success relative to aesthetic requirements, biomechanical outcomes and optimal bond strength and bond durability.

Adhesive
Science

Learning Objectives

- Choosing an appropriate bonding system for your practice
- Understanding the pros and cons of total etch, selective etch and self-etch systems
- Tips and tricks to improve bonding outcomes in your practice

Clinical
Tips & Tricks

Dr Simon Watson

Simon is a registered specialist prosthodontist. He completed his undergraduate and specialist training programs at Melbourne University.

He works in private practice and also holds clinical consultant positions at the Peter MacCallum Cancer Centre and the Royal Children's Hospital.

Simon is a member of the ADA, the Australian Prosthodontic Society (Vic Branch) and the Australasian Osseointegration Society (Vic), alongside a number of other study groups. He is the immediate past-president of the Australasian Osseointegration Society.
